

I waste food.

bad decisions

You buy more food than you need and throw away what you don't eat.

Fun fact:

If food waste were a country, it would be the third largest emitter of greenhouse gases.

I drive everywhere.

bad decisions

You use a car even for very short distances that could easily be walked or cycled.

Fun fact:

Almost half of all car trips in cities are shorter than 5 km.

I leave lights and devices on.

bad decisions

You keep lights, chargers and electronics on even when you are not using them.

Fun fact:

Stand-by electricity can account for up to 10% of household energy use.

I ignore climate information.

bad decisions

You avoid learning about climate change because it feels uncomfortable.

Fun fact:

People who understand climate change are much more likely to change their habits.

Global climate agreements remain weak.

bad decisions

Decision.

Countries fail to reach strong international agreements to reduce greenhouse gas emissions.

Result.

Climate policies remain fragmented and insufficient to prevent dangerous warming.

Fossil fuels remain subsidised.

bad decisions

Decision.

Governments continue spending billions supporting oil, gas and coal instead of investing in clean energy.

Result.

Fossil fuels remain cheaper than renewable energy, slowing the global energy transition and keeping emissions high.

Climate action is constantly postponed.

bad decisions

Decision.

Important policies to reduce emissions are repeatedly delayed or weakened.

Result.

Every decade of delay makes climate solutions more expensive and less effective.

Short-term profits drive decisions.

bad decisions

Decision.

Political and economic priorities focus on immediate economic growth rather than long-term environmental stability.

Result.

Industries continue polluting while climate risks increase for future generations.
