

Water is safer then ever.

positive future

Cities collect rainwater, recycle water, and use smart water management systems.

Fun fact:

Some cities today reuse up to 90% of their water.

Bees and butterflies are back.

positive future

Flower meadows, urban gardens, and pesticide-free agriculture have enabled pollinators to recover.

Fun fact:

In some regions, the number of pollinators has increased by more than 50%.

Cities are full of trees.

positive future

The year is 2050. Cities have been transformed into green oases. Streets are shaded by tree-lined avenues, and parks have doubled in size.

Fun fact:

More than a million new trees have been planted in many cities.

Wild animals are returning.

positive future

In many parts of the world, people are seeing animals that were once extinct again - whales, wolves, bison, and large birds.

Fun fact:

Populations of some large marine mammals have doubled since the beginning of the century.

People are healthier.

positive future

Due to cleaner air, more greenery, and an active lifestyle, people have fewer diseases related to climate and pollution.

Fun fact:

Air pollution in many cities has decreased by more than 60%.

People no longer have to migrate.

positive future

Due to climate stabilization and adaptation, millions of people are no longer forced to leave their homes.

Fun fact:

In many regions, climate migration has almost stopped.

Hunger is largely reduced.

positive future

Sustainable agriculture, local food production, and smart food distribution systems have reduced world hunger.

Fun fact:

Some regions produce twice as much food while using less water.

Energy no longer causes wars.

positive future

Most energy comes from the sun, wind, and other renewable sources that are available almost everywhere.

Fun fact:

The Sun gives the Earth more energy every year than humanity uses in an entire year.

Food waste cut in half.

positive future

New distribution systems and smarter consumption habits have drastically reduced food waste in households, restaurants, and supermarkets.

Fun fact:

Global food waste has fallen by 50%.

Young people believe in the future
again.

positive future

The year is 2050. Young people know that the world has managed to change direction and that major global problems can be solved by working together.

Fun fact:

Citizen climate action has become one of the largest global movements in history.
